

FYTOGREEN'S

Pre - Grown Green Facade Unit

Key Benefits...

- Multiple Attachment Points to Host Facade
- Reduced Installation Time
- Less Prone to Plant Failure
- Cost Effective
- Highly Mobile

Combining Fytogreen's unique media properties, purpose designed LLDPE planter boxes and Fytogreen's horticultural experience, Fytogreen has an expanding range of pre-grown green facade systems. All have been independently certified for engineering suitability.

The usual draw back with green facades is that it can take 2-3 years before the foliage cover expected can be met. Fytogreen has over come this problem by having the ability of pre growing the facades at our facility, ensuring easy access for maintenance during the critical early stages of the plants life. This option is cost effective and significantly less prone to plant failure.

The pre-grown module design caters for easier transportation to site and are craned directly to the installed location. With multiple attachment points the system has options for permanent attachment to the building's host facade.
